

PRECISION BUILT EYEWEAR

Action/Night

series

You don't want to wear sunglasses in the dead of night. That's just dangerous. But when the sun is setting, shift your dark lensed glasses to sunglasses with lighter tints.

Gatorz Action/Night Series lenses represent a family of lens filters that allow you to choose the optimum lens color and density for your specific sport and sunlight conditions. These lenses

are all about contrast and performance enhancement. You know the game so why not pair it up with the best in optics. For starters, try blue or orange for those hair raising single track trails under the bristle cone tree canopy. Or what about crystal clear or yellow designed to protect your eyes from dust and debris and they're excellent at protecting your eyes in blizzard cold or windy conditions too.

Try gradient lenses for moderate to low lighting conditions such as cloudy days or evenings. Yellow lenses are commonly used by golfers and shooters for its contrast enhancement and depth perception properties. Clear lenses are used typically to protect the eyes from impact, debris, dust, or chemicals or for night time activities. For instance being in the wind on a motorcycle exposes the eyes to hazards of all types, this constant attack on our eyes causes all kinds of problems and tends to make traveling a little less enjoyable.
